

The MACK Group, LLC Completes Asbestos Mastic Flooring Removal Project

The MACK Group, LLC, a premier asbestos abatement and flooring removal contractor, recently completed a project that consisted of the abatement of asbestos mastic on a concrete floor. The project was performed for a national environmental general contractor at a large private college in Connecticut.

The MACK Group, LLC (MACK) was contracted to abate asbestos mastic that was adhered to a concrete floor without damaging concrete. The estimated quantity of asbestos containing mastic that needed to be abated was approximately 30,000 square feet.

To remove the asbestos mastic, MACK used a combination of proprietary flooring removal machines that they own in their fleet of abatement equipment. These machines allowed MACK to easily remove the mastic down to the original concrete floor surface without damaging the existing concrete.

The project was completed safely without incident or injury in 3 days.

About The MACK Group, LLC

The MACK Group, LLC is an expert contractor providing a wide range of services from asbestos removal and abatement to decontamination nationwide as well as Puerto Rico. We take great pride in our impeccable safety record and our commitment to meeting our client's project schedules and monetary budgets. Our services include asbestos, mold and lead abatement and removal, industrial and pharmaceutical duct cleaning and biological and chemical remediation, and all types of concrete surface preparation and floor covering removal (shot blasting, terminator sales, etc.).
